SUMMARY

Python Backend Engineer specializing in Generative AI and AI-driven backend systems, with 3+ years of overall backend experience, including 1+ year building RAG pipelines, LLM-powered applications, and scalable APIs using Fast API, Lang Chain, and the OpenAI API. Previously worked as a C# backend developer for 3.5 years, providing a strong foundation in backend architecture and system design before transitioning into Python and Generative AI.

SKILLS

Languages & Frameworks: Python, JavaScript, SQL, Fast API, ASP.NET CORE MVC, C#

Frontend: HTML5, CSS3, Bootstrap, jQuery, AJAX

Databases: PostgreSQL, Chroma DB

Tools: VS Code, Cursor, Postman, Docker, Swagger UI

Web Servers: IIS

Version Control: Git, Team Foundation Server (TFS)

AI / ML: Lang Chain, OpenAI API, RAG Pipelines, Vector Embeddings, Ollama

WORK EXPERIENCE

Junior Software Developer — System Consultant Information India (P) Ltd

Tumkur, Karnataka | **Oct 2022 – Present**

- Develop and maintain full-stack web applications using Python and the Fast API framework.
- Design, optimize, and manage database schemas to improve performance and efficiency.
- Build scalable, secure, and reliable web solutions aligned with business requirements.
- Work with both Python and .NET technologies across various project environments.
- Follow Agile methodologies, participating in sprint planning, development, testing, and deployment.

NISSIN TRANSPORT CORPORATION | ASP.NET CORE MVC, C#, PostgreSQL

Oct 2022 – Present

- Performed comprehensive source code analysis to identify and resolve functionality issues, enhancing system reliability and reducing bug count.
- Deployed and maintained applications on dedicated servers, ensuring stable releases across TEST and PRODUCTION environments.
- Completed a 6-month onsite assignment in Japan (May 2025 – October 2025), collaborating with cross-functional teams and delivering globally aligned solutions.
- Utilized Team Foundation Server (TFS) for version control, work item tracking, and collaborative development.

AI-Powered Company Chatbot (R & D Project) | Fast API, Lang Chain, OpenAI, Ollama, RAG, Chroma DB, Docker,

Feb 2025 – Present

- PDF is Company documents/PDFs are parsed, chunked, converted into vector embeddings using OpenAI, and stored in Chroma DB for semantic search.
- User questions are embedded and compared against stored chunks using similarity search to retrieve the most relevant content.
- Lang Chain orchestrates the RAG flow, combining retrieved chunks with the user's question into a prompt and sends it to Ollama (with OpenAI fallback) for a grounded, context-aware answer.
- REST endpoints handle document upload, real-time chatbot interactions, question answering, and chat history containerised with Docker and documented via Swagger UI.

EDUCATION

Bachelor of Engineering in Mechanical Engineering

CMR Institute of Technology, Bengaluru | CGPA: 7.4 / 10 | **2019 – 2022**
